

## Pullman Park Site Development

Chicago, IL

Trice Construction Company installed over 85,000 SF of concrete road pavement. The project consisted of various types of pavements in multiple locations on a 52 acre site for a private developer, the City of Chicago Department of Transportation (CDOT) and the Illinois Department of Transportation (IDOT).

The specific scope of work included:

- Remediation of concrete pavement on an existing City of Chicago arterial street and intersection (111<sup>th</sup> & Doty Ave.) while ensuring continuous traffic flow.
- Installation of temporary roads to allow access to existing businesses to maintain normal operations during installation of new pavement
- Remediation of concrete pavement for existing Interstate 94 exit ramp, replacing the existing pavement in sections to maintain access for vehicular traffic.
- Installation of additional lane to the ramp to allow access to the new road leading into the new site.
- Installation of approximately 3/4 miles of sidewalks and curbs & gutter

*Project Value:* **Not Disclosed**
